

Campus Connect 2.0

SE352 - Object Oriented Enterprise Application Development

Overview

This version of campus connect will have a simple way to register for classes, swap out the classes you're in, and drop classes.

Requirements

Use Cases

- Searching for classes to take.
- Adding classes to your course cart.
- Removing classes from your course cart.
- Enrolling in classes.
- Dropping classes.
- Swapping a class you're registered in for a class in your course cart.
- Seeing a calendar view of your classes.

Description of Problem

The current campus connect is very bulky and hides key features. Campus Connect 2.0 will make it easy to enroll and handle coursework - one of it's most essential features.

Design

Web UI (Common case)

Table Layout

Coming soon!

Deployment

Coming soon!

How Design Meets the Requirements

The requirements were to have 3 major functionalities, use a database, and Javascript and HTML - essentially a web UI. As we'd like to team up for this assignment, we have proposed 7 key functionalities to increase difficulty appropriately. We are planning to need 2 tables for the database component, so we'll definitely have a database. Finally, this will be a web version of campus connect, so we'll be using HTML and Javascript for our Web UI.
